

# Webinar Series: Utilizing AI In PK- 12 Education

## Sessions

### Ethical AI: Choosing Tools for Deep Learning

April 23rd @ 4:00 pm

### Responsible AI in the Classroom: Tools, Strategies, and Best Practices

May 7th @ 4:00 pm

### NGSS Mastery: Leveraging AI for Science Growth

May 21st @ 4:00 pm

This three-part webinar series explores how educators can thoughtfully and effectively integrate artificial intelligence (AI) into teaching and learning. The first session focuses on understanding different types of AI, along with their benefits, risks, and necessary safeguards. Participants engage in collaborative discussions to develop strategies that ensure ethical use and promote deep, meaningful learning for all students. Emphasis is placed on evaluating AI tools critically and aligning their use with sound pedagogical practices.

The second and third webinars shift toward practical application. Educators learn how to leverage AI to support lesson planning, differentiation, and resource creation while maintaining a human-centered approach to teaching. The series concludes with a focused look at AI in science education, highlighting tools like Inq-ITS that support real-time instruction and assessment aligned with NGSS standards. Across all sessions, participants gain actionable strategies for responsible AI integration, enhancing both instructional effectiveness and student learning outcomes.

- ✓ Master Future Classroom Technology
- ✓ Ensure Equitable AI Access
- ✓ Protect Student Digital Privacy
